

£450 million spend

Vehicle Charging Infrastructure Solutions

The Breakdown

The Vehicle Charging Infrastructure Solutions Framework offers customers in central government and the wider Public Sector access to products and services that support vehicle charging infrastructure, such as charge points. Buyers can purchase a full end-to-end solution or specific elements to support the transition to low emission vehicles.

This Solutions Framework was created as a means of helping the Government implement a 'Green Industrial Revolution'. One major aspect of the Government's ten point plan is accelerating the shift towards zero-emission vehicles. This procurement's aim is to make owning an electric car just as easy as a petrol or diesel car. This in turn is likely to have the outcome of increasing the uptake of electric vehicles in the UK, thereby decreasing emissions, and bringing the Government closer to its target of reaching net zero emissions by the year 2050.

The Key Stats

-  **£450 million** spend value
-  **4 year** procurement
-  **Long term** revenue and growth
-  **Increased** scope/scale of service offerings
-  **Enables access** to wider supply chains for specialist services

Service Categories

- 01** Installation Location

- 02** Consultancy and Feasibility

- 03** Groundworks, Civil Engineering and Construction

- 04** Hardware and Accessories

- 05** Installation and Decommissioning Services

- 06** Servicing and Maintenance

- 07** Software and Back Office Solutions

- 08** Full End-to-End Service
